

Literature corpus report

Query: `tiny fixture`

Papers: 2

Included papers

- **Neural attention models** — `1111.1111v1`
- **BERT and masking** — `2222.2222v1`

Gap / limitation themes (auto-clustered)

Cluster 0

Limitations. Our study is restricted to small-data regimes. Future work includes scaling to larger corpora and exploring alternative attention heads.

Cluster 1

Language model pre-training with masked tokens. Future work: investigate larger masking spans and document-level objectives. Unfortunately, we failed to beat the strongest baselines on small tasks.

Ranked novelty hypotheses

1. Investigate whether combining or jointly modeling 'neural' and 'transformer' can address under-explored interactions in this literature (empirical co-mention weight ≈ 0.0180).

- **Scores:** combined 0.8021 (novelty 0.9939, feasibility 1.0, impact 0.0259)

1. Investigate whether combining or jointly modeling 'neural' and 'quality' can address under-explored interactions in this literature (empirical co-mention weight ≈ 0.0180).

- **Scores:** combined 0.8021 (novelty 0.9939, feasibility 1.0, impact 0.0259)

1. Investigate whether combining or jointly modeling 'neural' and 'restricted' can address under-explored interactions in this literature (empirical co-mention weight ≈ 0.0180).

- **Scores:** combined 0.8021 (novelty 0.9939, feasibility 1.0, impact 0.0259)

1. Conduct targeted empirical and theoretical work on the following recurring limitation theme identified across papers: Language model pre-training with masked tokens. Future work: investigate larger masking spans and document-level objectives. Unfortunately, we failed to beat the strongest baselines on small tasks.

- **Scores:** combined 0.7951 (novelty 0.979, feasibility 1.0, impact 0.0281)

1. Conduct targeted empirical and theoretical work on the following recurring limitation theme identified across papers: Limitations. Our study is restricted to small-data regimes. Future work includes scaling to larger corpora and exploring alternative attention heads.

- **Scores:** combined 0.7934 (novelty 0.9752, feasibility 1.0, impact 0.0288)
